AMPIGENE® qPCR 1-Step Green Kit Hi-ROX

Optimized and efficient cDNA synthesis and dye-based qPCR in a single tube

AMPIGENE® qPCR 1-Step Green Kits use the latest developments in reverse transcriptase (RTase) technology and buffer chemistry for efficient cDNA synthesis and qPCR in a single tube.
The modified MMLV RTase is blended with RNase inhibitor to prevent degradation of RNA by contaminating RNase. The RTase is thermostable and extremely active.
AMPIGENE® qPCR 1-Step Green Kits use a proprietary intercalating dye that does not inhibit PCR.
An optimized buffer system allows efficient amplification and proprietary enhancers prevent the formation of primers/dimers to increase sensitivity and specificity.
ROX is a reference dye which is used to normalize fluorescent signal in qPCR. AMPIGENE® qPCR 1-Step Green Kits come with either Lo-ROX or Hi-ROX concentration. For Lo-ROX, see Prod. No. ENZ-NUC108. Choose the appropriate ROX concentration for the instrument (see instrument compatibility for reference dye chart below.

- Convenient one tube reaction
- Thermostable and extremely active RTase
- For dye-based qPCR applications: Green dye does not interfere with PCR
- Optimized buffer system for efficient amplification
- Enhancers and stabilizers improve reaction sensitivity and specificity
