Figure: Immunoprecipitation/Western blot showing the detection of Bcl-w in human and mouse cell lines. Lysates from 10^7 cells were immunoprecipitated by clone 13F9 and the fractionated proteins were then blotted with the same antibody. Hsp-70 expression was used as an equal loading control, and 293T cells transiently transfected with a human *bcl-w* expression construct were used as a positive control.
