cAMP polyclonal antibody

Cyclic AMP (cAMP) is one of the most important second messenger involved as a modulator of physiological processes. A number of hormones are known to activate cAMP through the action of the enzyme Adenylate cyclase which converts ATP to cAMP. cAMP has been shown to be involved in the cardiovascular and nervous systems, immune mechanisms, cell growth and differentiation, and general metabolism.

Handling & Storage

Handling Avoid freeze/thaw cycles.

Long Term Storage -20°C

Shipping Blue Ice

Regulatory Status RUO - Research Use Only

Product Details

Alternative Name Cyclic AMP

Application ELISA

Formulation Neat serum.

Host Rabbit

Immunogen cAMP conjugated to a protein carrier molecule.

Source Whole rabbit serum.

Species Reactivity Species independent

Worry-free Guarantee This antibody is covered by our Worry-Free Guarantee.
