Handling & Storage

Long Term Storage	+4°C
Shipping	Blue Ice

Regulatory Status

RUO - Research Use Only

Product Details

Alternative Name	FcγRII
Application	Flow Cytometry
Application Notes	Functional Application (blocks immune complex binding, as does the $F(ab')_2$ fragment). The F(ab')2 fragment blocks non-antigen-specific binding of immunoglobulins to the FcγIII and FcγII receptors *in vitro*. It is therefore a useful tool to reduce strong background staining of Fc-containing MAbs in FC and IHC. Also useful when recombinant Fc:fusion proteins are employed as detection tools for the detection of the cognate ligands.
Clone	7.3
Host	Mouse
Immunogen	Human K562 tumor cells and L cells transfected with human CD32 (FcγRII).
Isotype	IgG1
Species Reactivity	Human
Specificity	Recognizes an epitope in domain 2 of all CD32 isoforms.
