HSC70/HSP73 (bovine), (recombinant)

Recombinant bovine Hsc70/Hsp73, a constitutive cytosolic Hsp70 chaperone that assists protein folding, refolding of misfolded proteins, and proteostasis through ATP-dependent substrate binding and interaction with Hsp40.

The Hsp70 family of heat shock proteins contains multiple homologs ranging in size from 66-78 kDa, and are the eukaryotic equivalents of the bacterial DnaK. The most studied Hsp70 members include the cytosolic stress-induced Hsp70 (Hsp72), the constitutive cytosolic Hsc70 (Hsp73), and the ER-localized BiP (Grp78). Hsp70 family members contain highly conserved N-terminal ATP-ase and C-terminal protein binding domains. Binding of peptide to Hsp70 is assisted by Hsp40, and stimulates the inherent ATPase activity of Hsp70, facilitating ATP hydrolysis and enhanced peptide binding. Hsp70 nucleotide exchange and substrate binding coordinates the folding of newly synthesized proteins, the re-folding of misfolded or denatured proteins, coordinates trafficking of proteins across cellular membranes, inhibits protein aggregation, and targets the degradation of proteins via the proteasomal pathway.

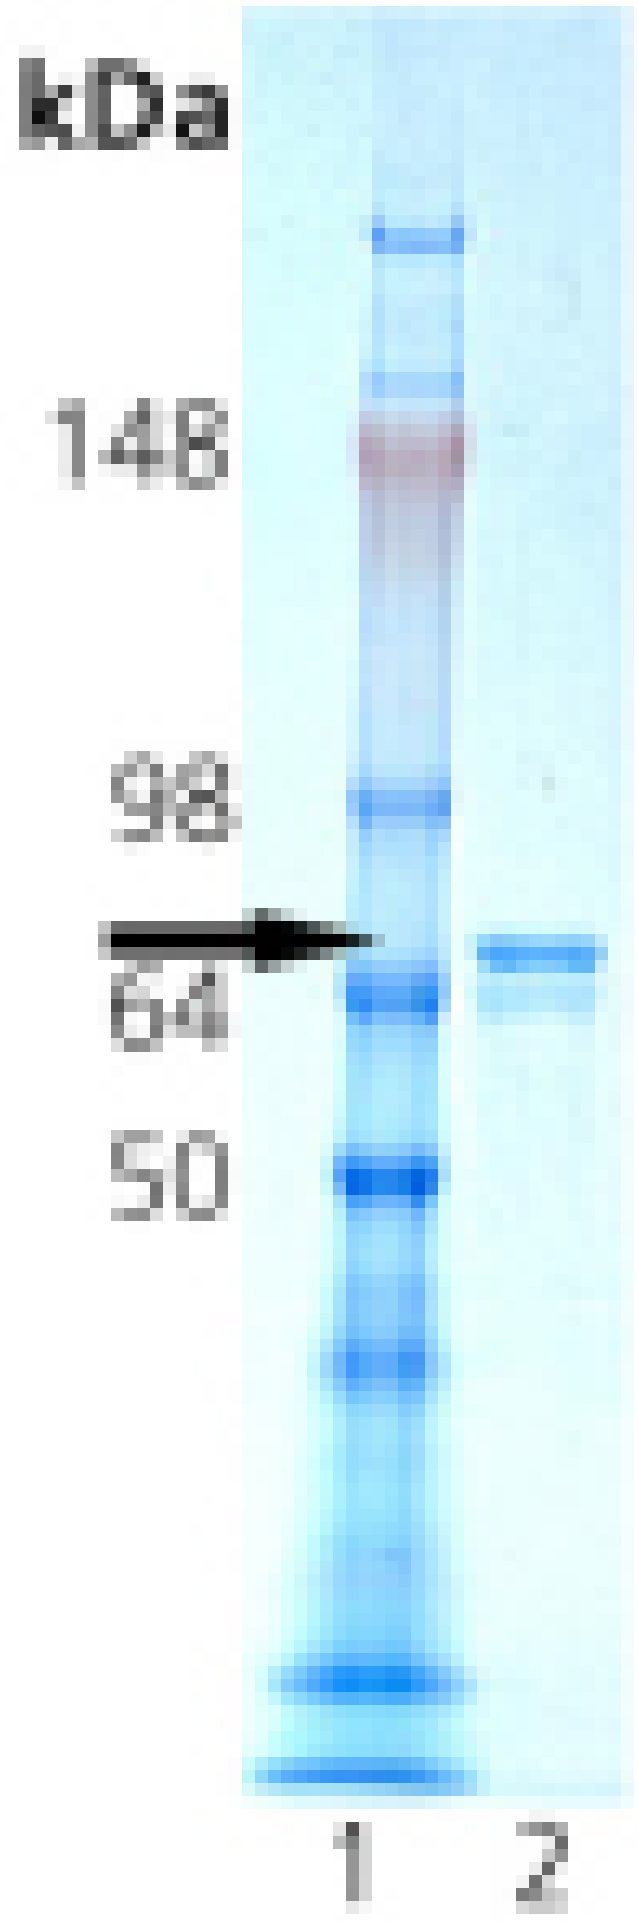
Western Blot analysis: Lane 1: MWM, Lane 2: 100 ng of Bovine Hsc70 (HSP73) Protein, Lane 3: 100 ng of E. coli DnaK Protein. Left: probed with anti-Hsc70 (HSP73) mAb. Right: probed with anti-DnaK mAb.



SDS-PAGE analysis: Lane 1: MW marker, Lane 2: 0.5µg of Recombinant Hsc70 (HSP73) Protein.

Handling & Storage

Long Term Storage	-80°C
Shipping	Dry Ice

Regulatory Status RUO - Research Use Only

Product Details

Alternative Name	Heat shock cognate 71 kDa protein, Heat shock 70 kDa protein 8, HSPA8
Application Notes	ATPase activity assay (positive). Western blot control.
Formulation	Liquid. In 30mM TRIS-HCl, pH 7.5, containing 1.0mM EDTA, 2.0mM DTT, and 300mM sodium chloride.
MW	~73kDa
Purity	≥90% (SDS-PAGE; Western blot)
Purity Detail	Purified by multi-step chromatography.
Source	Produced in *E. coli*.
UniProt ID	P19120
