## Hydrogen peroxide fluorometric detection kit

The Hydrogen Peroxide fluorometric detection kit provides fast results in just 10 minutes for the measurement of either hydrogen peroxide or peroxidase activity in a convenient one-step homogeneous assay.

Hydrogen Peroxide  $(H_2O_2)$  is a reactive oxygen metabolic by-product that serves as a key regulator for a number of oxidative stress related states. Functioning through NF $\kappa$ B and other factors, Hydrogen peroxide-mediated pathways have been linked to asthma, inflammatory arthritis, atherosclerosis, diabetic vasculopathy, osteoporosis, and a number of neurodegenerative diseases.

- Flexible measure hydrogen peroxide or peroxidase activity
- Higher throughput one step homogeneous mix-and-read assay
- Fast results in just 10 minutes

## **Handling & Storage**

Long Term Storage +4°C

Shipping Blue Ice

Regulatory Status RUO - Research Use Only

**Product Details** 

Application Fluorescent detection, HTS

**Application Notes** For the measurement of hydrogen peroxide in cell lysates and culture supernatants from

any species.

Contents Reaction buffer concentrate, Detection Reagent, Hydrogen peroxide, Horseradish

peroxidase

**Sensitivity** (range  $0 - 10 \mu M (H2O2)$ ; 0 - 25 mU/ml (peroxidase)

Species Reactivity Species independent
