

IL-1 β (rat), ELISA kit

The IL-1 β (rat), ELISA kit is a colorimetric immunometric enzyme immunoassay kit

The IL-1 β (rat), EIA kit is a colorimetric immunometric enzyme immunoassay kit with results in < 4 hours.

The interleukin-1 (IL-1) cytokine family consists of IL-1 α , IL-1 β , and IL-1R α (receptor antagonist) which are expressed primarily by endothelial cells and activated macrophages. IL-1 α and IL-1 β elicit pro-inflammatory cytokine production and cellular activation, and are the primary mediators of hypothalamic regulation that results in fever. IL-1 α and IL-1 β signals are transmitted via a dual subunit IL-1 receptor composed of IL-1R1 and the IL-1 receptor accessory protein (IL-1RAcP). IL-1RAcP is vital to IL-1 signaling, as it recruits the IL-1 receptor-associated kinase (IRAK) to the receptor complex, initiating NF- κ B pathway activation.

- Sensitive - use less precious sample per test
- Higher throughput - test up to 40 samples in duplicate in less than 4 hours
- Quantitative - obtain statistically significant results and compare data between multiple experiments
- Ready-to-use - pre-coated plates save time and reduce errors

Handling & Storage

Long Term Storage +4°C

Shipping Blue Ice

Regulatory Status

RUO - Research Use Only

Product Details

Alternative Name Interleukin-1 β

Application Colorimetric detection, ELISA

Application Notes For the quantitative determination of IL-1 β in culture supernatants and serum of rat origin.

Assay Time <4 hours

Compatibility This product is compatible with the [**Absorbance 96 Plate Reader.**](#)

Contents Microtiter plate, SA-HRP concentrate, SA-HRP dilution buffer, Biotinylated antibody, Standard, Standard diluent, Wash buffer concentrate, TMB Substrate, Stop solution

Sensitivity 4 pg/mL (range 31.3 – 2,000 pg/mL)

Species Reactivity Rat

Technical Info / Product Notes **Cited samples:**
