Lavendustin A

EGFR inhibitor

Cell permeable tyrosine kinase inhibitor with little effect on cAMP-dependent protein kinase (PKA) or protein kinase C (PKC). Potent and selective inhibitor of the EGF receptor tyrosine kinase (IC_{50}=11nM). Binds to a site on the kinase which is distinct from the ATP and peptide substrate binding sites. Inhibits EGF-induced proliferation of cultured human myometrial smooth muscle cells and suppresses VEGF-induced angiogenesis in rats. Effective at 10μM in cultured leech neurons. Also inhibits NMDA-stimulated cGMP production.
