ODQ

Guanylyl cyclase inhibitor

ODQ is a potent and selective, direct-acting inhibitor of guanylate cyclase (IC_{50}=20 nM). In cerebellar slices ODQ reversibly inhibited cGMP generation in response to endogenous NO or exogenously added NO-donors. ODQ does not inhibit NO-mediated macrophage toxicity (a phenomenon unrelated to cGMP) and does not inhibit particulate guanylyl cyclase or adenylyl cyclase. ODQ is an unique and selective tool to elucidate the physiological importance of the NO-cGMP pathway.

Handling & Storage

Use/Stability	As indicated on product label or CoA when stored as recommended. Solutions may decompose slowly.
Handling	Protect from light.
Short Term Storage	+4°C
Long Term Storage	-20°C
Shipping	Ambient Temperature

Regulatory Status

RUO - Research Use Only

Product Details

Appearance	Off-white to yellow powder.
CAS	41443-28-1
Couple Target	Guanylyl cyclase
Couple Type	Inhibitor
Formula	$C_9H_5N_3O_2$
MW	187.2
Purity	≥98% (TLC)
Solubility	Soluble in DMSO (5mg/ml), ethyl acetate or 100% ethanol (1.2mg/ml); insoluble in water.
