Application Notes

The ENZO PATHO-GENE® HPV type 16/18 probe employs a mixture of the HPV 16 and HPV 18-specific probes that detect HPV types that have been associated with cervical intraepithelial neoplasia (CIN) and carcinoma *in situ* (CIS). The probe mixture is denatured and hybridized to the tissue section fixed and pretreated on the microscope slide. Specific hybridization between the HPV DNA probe and DNA in the specimen is determined by the detection of biotin.
