# Streptomycin ELISA kit

Competitive immunoassay for the detection of streptomycin in cell culture supernatants and tissue samples

The Streptomycin EIA kit is a colorimetric competitive enzyme immunoassay kit with results in 75 minutes. Absorbance is read at 450 or 630 nm. Very low reactivity with other antibiotics provides confidence in assay results. Sensitive quantification of 0.1 ng/mL Streptomycin. Reagents and protocol for sample extraction is included in the kit.

Streptomycin is an antibiotic medication used to treat a number of bacterial infections. Streptomycin is an aminoglycoside. It works by blocking the ability of 30S ribosomal subunits to make proteins, which results in bacterial death. Streptomycin, in combination with penicillin, is used in a standard antibiotic cocktail to prevent bacterial infection in cell culture. When purifying protein from a biological extract, streptomycin sulfate is sometimes added as a means of removing nucleic acids.

### **Ordering Information**

Order Online »

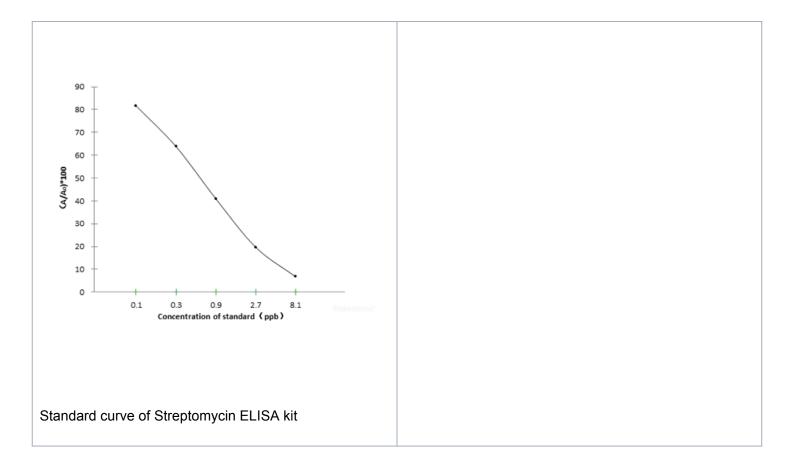

ENZ-KIT219-0001

96 wells

Manuals, SDS & CofA

**View Online** »

- Sensitive measurement, detecting as little as 0.1 ppb (ng/mL) streptomycin
- Cost effective and fast, with results in 75 minutes
- Easy-to-use liquid color-coded reagents and pre-coated plates minimize error

#### **Handling & Storage**

**Use/Stability** Store all components at 2-8°C

Handling Do not freeze

Long Term Storage +4°C

Shipping Blue Ice

## Regulatory Status RUO - Research Use Only

#### **Product Details**

**Application** Colorimetric detection, ELISA

**Application Notes**For the quantitative determination of Streptomycin in cell

culture supernatants, tissue (muscle), milk, milk powder,

honey.

Assay Time 75 min

Compatibility This product is compatible with the Absorbance 96 Plate

Reader.

Contents Microtiter plate, Conjugate, Antibody Working Solution,

Substrate Reagents, Wash Buffer Concentrate, Standard,

Stop solution, Reconstitution Buffer

**Crossreactivity** Clarithromycin – 6.5%, Gentamicin – 2.5%

Sensitivity 0.1 ppb (ng/ml)

Species Reactivity Species independent

**Specificity** Streptomycin – 100%, Dihydrostreptomycin – 100%

Wavelength 450 nm/630nm
