Vimentin (human) monoclonal antibody (65E)

Vimentin is a the type III intermediate filament (IF) protein expressed in a variety of mesenchymal and non-mesenchymal cells, including muscle cells, astrocytes, neurons, endothelial cells and fibroblasts. During development of the mammalian nervous system vimentin is transiently expressed in neuronal precursor cells, often with the type VI IF, nestin. Vimentin appears to play a role in many intracellular processes, recent examples from the literature include adhesion, glial scar formation, neuronal migration, and the normal development of Bergmann glia.

Handling & Storage

Long Term Storage	-20°C
Shipping	Blue Ice

Regulatory Status RUO - Research Use Only

Product Details

Application	IHC, WB
Clone	65E
Host	Mouse
Immunogen	Electrophoretically purified vimentin from human cultured fibroblasts.
Isotype	IgG1
Species Reactivity	Human
UniProt ID	P08670
Worry-free Guarantee	**This antibody is covered by our Worry-Free Guarantee .**
