ViraBind™ Adenovirus Miniprep Kit

Purification of viruses via cesium chloride ultracentrifugation procedures can be tedious and time-consuming. ViraBind™ Adenovirus Purification Kits provide a much more efficient system for fast adenoviral purification with high yields. The ViraBind™ Adenovirus Miniprep Kit uses a special spin column to purify supernatant from a single T75 flask or 10cm dish per prep in about 30 minutes.

- Achieve the quality of CsCl procedures in <2 hours, without ultracentrifugation
- Recover >90% adenoviral yield
