ZytoDot® 2C SPEC IGH Break Apart Probe

For the detection of translocations involving the IGH locus at 14q32.33 by chromogenic *in situ* hybridization (CISH)

The ZytoDot® 2C SPEC IGH Break Apart Probe is designed to detect translocations involving the chromosomal region 14q32.33 harboring the IGH gene. Rearrangements involving the IGH gene are considered to be cytogenetic hallmarks for non-Hodgkin lymphoma which represent 50% of all hematological malignancies.
