ZytoDot® SPEC ERBB2 Probe (Digoxigenin)

For the detection of the human ERBB2 gene by chromogenic *in situ* hybridization (CISH).

The ZytoDot ® SPEC ERBB2 Probe is designed for the detection of ERBB2 gene amplification, frequently observed in solid malignant neoplasms, in tissue sections or cell samples. Amplification of the proto-oncogene ERBB2, observed in approximately 20% of all breast cancer samples, has been correlated with a poor prognosis of the disease. Similar results have been obtained for a variety of other malignant neoplasms e.g. ovarian cancer, stomach cancer, and carcinomas of the salivary gland.

Handling & Storage

Long Term Storage	+4°C
Shipping	Blue Ice

Regulatory Status

RUO - Research Use Only

Product Details

Alternative Name	c-erbB2, HER2, NEU
Application	CISH
Formulation	Solution of salt (containing synthetic polynucleotides) in water
Quantity	Sufficient for 10 tests (100 µl size) or 40 tests (400 µl size), using 10 µl probe solution per test.
