ZytoLight® SPEC CIC Dual Color Break Apart Probe

For the qualitative detection of translocations involving the human CIC gene at 19q13.2 by fluorescence in situ hybridization (FISH)

The ZytoLight® SPEC CIC Dual Color Break Apart Probe is designed to detect translocations involving the chromosomal region 19q13.2 harboring the CIC gene. Rearrangements involving the CIC gene are frequently found in EWSR1-negative small blue round cell tumors (SBRCT) which arise in soft tissues of children and young adults and have been described as aggressive tumors with an inferior overall survival compared to Ewing sarcoma (EWS).
