ZytoLight® SPEC CUX1/EZH2/CEN 7 Triple Color Probe

For the qualitative detection of deletions involving the human CUX1 gene in 7q22.1 and the human EZH2 gene in 7q36.1 as well as alpha satellites of chromosome 7 by fluorescence in situ hybridization (FISH)

The ZytoLight ® SPEC CUX1/EZH2/CEN 7 Triple Color Probe is designed to detect losses of an entire chromosome 7 (monosomy 7) and deletions of the long arm of chromosome 7 (del(7q)). Myeloid malignancies with monosomy 7 or del(7q) respond poorly to chemotherapy and are associated with an unfavorable prognosis.
