ZytoLight® SPEC KRAS/CEN 12 Dual Color Probe

For the detection of the human KRAS gene and alpha-satellites of chromosome 12 by fluorescence *in situ* hybridization (FISH).

The ZytoLight® SPEC KRAS/CEN 12 Dual Color Probe is designed for the detection of KRAS gene amplifications found e.g. in lung cancer. Mutations of KRAS are frequently found in epithelial malignancies and lead to activation of the downstream mitogen-activated protein kinase resulting in unchecked cellular proliferation and tumor progression.
