ZytoMation® ALK Dual Color Break Apart FISH Probe

For the qualitative detection of translocations involving the human ALK gene at 2p23.1-p23.2 by fluorescence *in situ* hybridization (FISH) on automated Bond systems

The ZytoMation® ALK Dual Color Break Apart FISH Probe is designed to detect rearrangements involving the chromosomal region 2p23.1-p23.2 harboring the ALK gene. ALK encodes a transmembrane receptor tyrosine kinase. This gene exerts characteristic oncogenic activities through fusion to several gene partners or mutations both in hematopoietic and non-hematopoietic solid tumors. Translocations affecting the ALK gene locus are frequently found in ALCL.

Handling & Storage

Long Term Storage	+4°C
Shipping	Blue Ice

Regulatory Status

RUO - Research Use Only

Product Details

Application	FISH
Quantity	Sufficient for up to 20 tests using 240 µl probe solution per test.
Technical Info / Product Notes	For the Manual please click here.
